Mirza Muhammad Jamal Nasir

MACHINE LEARNING ENGINEER

Phone: +447946759658

Email : mirzajamal750@gmail.com :mirza-jamal-bba28611b

Tooting, Hailsham road ,London (SW17 9EN)

Dynamic academic and industry professional with extensive experience in teaching and applying advanced concepts in AI, Machine Learning, and Data Science. Proven track record of designing and delivering high-quality educational content, mentoring students, and leading AI-driven projects. Adept at aligning academic knowledge with industry needs, fostering innovation, and contributing to research initiatives. Seeking a Teaching Fellow role where I can leverage my teaching experience, technical expertise, and leadership skills to advance Strathclyde's academic community.

ABOUT ME

I have completed my Bachelor in computer software Engineer from Foundation University Islamabad in 2019.
during my degree I was also the part of Z media software house as Requirement Engineer after that my Machine learning learning phase was also started in software house after 6 month PM appreciate my learning skill and promote me as ML engineer at Z Media technology.During degree I was appoint as a ML Engineer in software house now I have up to 4 year of field experience. I have done many projects related to ML, DL, Computer vision, NLP and Time series analysis.Now I join Sigma as SML
in Feb 2023.

EDUCATION

MASTER OF DATA SCIENCE AND ADVANCE RESEARCH 2023-CONT;

UNIVERSITY OF HERTFORDSHIRE

The final submission is LLM fine-tuning, PEFT and comparison of IA3 and QLoRA

Bachelor In Computer Software Engineering

Foundation University Islamabad

Final Year Project: Event Halls Recommendation System

Intermediate (F.Sc)

Subject: Maths, Physics, Chemistry

Matriculation

Subjects: Maths, Chemistry, Physics, Computer

WORK EXPERIENCE

AS DEVELOPER

Machine Learning Team Lead Engineer — 06/2023- Cont;

Kyaas Solutions

On Kyaas Solution, I am working on a Team Lead role. Where I Dealing with Clients and development team. And design the ML architecture according to client also supervised the ML and developement team.

Senior Machine Learning Engineer — 02/2023-05/2023

Sigma Square

In Sigma Square, I am working as Senior Machine Engineer, Dealing with juniors and maintain their weekly working task. And also maintain the architecture of MLOps in various project. Also hands on Machine and Deep Learning , MLflow, AWS, Web Scrapping, maintain the Data Architecture.

Machine Learning Engineer — 03/2022- 01/2023

University of South Asia, Center of Innovation & Entrepreneurship (Software House)

In center for Innovation and Entrepreneurship, Our team is working on its own applications, and myself also work on health care app to classify the disease of patients. We are working from scratch, Data gathering from Doctors panel and implement them.

Machine Learning Engineer — 07/2018-02/2022

Zmedia Technology

In Z Media, I was machine learning engineer and mange many project with pipeline phenomena. Where almost all project was take from foreign.

Requirement Engineer — 01/2018-06/2018

Zmedia Technology

Work As Requirement Engineer, Its core Responsibility to apply work break down structure, Focus the sprints and scrum of PM, As well as get requirements from client or Domain Experts then Draw the scenario with reached the destination.

QUALIFICATION

- Associate Artificial Intelligence (Machine Learning/Deep Learning) from Punjab University Lahore under the supervision of NAVTTAC
- Introduction to Machine Learning by Ashish Shukla Session.
- AI-900 Azure (Microsoft)
- MERN stack development boot camp by PSEB and P@SHA, from Softoo
- Big Data-HCIA-AI BIGDATA V2.0 by Huawei.

SKILLS

- JavaScript
- Web Scrapping
- Data visualization
- Machine Learning
- Computer Vision
- Deep Learning
- Statical Modeling
- Dash Boards
- Django
- Time series Analysis
- Web development (MERN)
- Natural Language Processing
- TEAM LEAD

AS TEACHER

LECTURER of COMPUTER SCIENCE **2019-2020**

SUPER WINGS GROUP OF COLLEGES

start work as junior computer lecturer but after few months college section panel promote me as senior lecturer after reviewing my progress. Where is teach the student of 10th grades to M.com including these course:

1. GW basic programming
2. C language
3. Data Base
4. Operating System
5. Introduction to Information technology and its practicals
6. Management of Data systems

LECTURER of COMPUTER SCIENCE **2020-2022**

PUNJAB GROUP OF COLLEGES

They appoint me as junior computer lecturer but after a year college section panel promote me as senior lecturer after got 100% result in Punjab board. PGC give me these courses:

1. C language
2. Data Base
3. Operating System
4. Introduction to Information technology and its practicals

RESEARCHER IN DEPARTMENT OF ELECTRICAL AND COMPUTER ENGINEERING

THE PUNJAB UNIVERSITY LAHORE **2022-2023**

They appoint me for the NAVTTac youth skilled program which is start of the EX Prime Minister Imran khan as Artificial Intelligence and Data Science lecturer and lab instructor. Where student comes for school level to PhD research level. Govt of Pakistan also provide me the course content of this course including following areas:

1. Python
    a. Numpy
    b. Pandas
    c. Matplotlib
2. Data handling
3. Data analysis
4. Machine Learning
5. Deep Learning
6. Computer Vision
7. Natural Language Process
8. Chat bots
9. Time series analysis and Prediction
10. Azure

PROJECTS

- **Hall Recommendations System :**
  This System contain contains two filters collaborative and content based which recommend user on the trend best halls and also show the best hall according to there budget.
- **Jazz Package info Chat-bot :**
  This System give the package Info to the customer on there queries request. I applied based NLP concept with mirror words on this project to make it easy and simple through NLTk library
- **Saudi Real State companies Prediction :**
  This System is a actually a research base project after that my colleague publish the paper. Here I am apply LSTM, ARIMA, SRIMA, FB-PROPHET and NEURAL PROPHET to examine the data and predict the further window steps.
- **Cotton Leaf Disease Classification :**
  This System can classify the leafs of cottons with 3 disease other class is healthy one to save the Punjab government agricultural department. Here I apply 1-D image concept to achieved maximum accuracy level. Every dataset image convert to 1-D array.
- **Saudi Real state Companies Prediction with NLP :**
  This System, Can predict the future up coming up or downfall but this contains live numerical data as well as the tweeters tycoon tweets factors through api and then merge in to the normal dataset against that there is numerical data which comes from another numerical api then apply NLP.
- **Neural cell detection (mask RCNN Image Segmentation) :**
  This System is actually based on Image processing for the medical purpose where we detect the infected neurons in Patients reports. Here I use RCNN where as we have new algo's days like YOLO's. But that time was peak time of RCNN
- **Masked face Identification (GAN) :**
  This application developed for the security purpose of Punjab government to predict the face of person. Here in this system I work on image generator and discriminator.
- **Skin Cancer Image Classification :**
  This application developed for the Medical purpose of patients to classify the skin acne that have some initial virus symptoms or not.
- **Prediction of Stock Exchange, Bitcoin, Ethereum :**
  This System is basically have targeted Bitcoin and Ethereum prediction on the given data of Yahoo finance. When Bitcoin was at peak 65K $ our system predict the curve downwards which is almost 90% true the predicted value was 34K to 32K in next 60 days. which almost correct the error difference is about 1K to 2K which quiet good.
- **IoT bot Net DDos classification**
  In This project I was remotely work with a client of Saudi Arabia. They want to build a check path for server to save the server from DDOS attacks. Here I do data engineering, feature selection engineering to reduced the computing cost and apply Machine Learning algorithm and Deep Learning and got 99% accuracy.
- **DIN News filter for live transmission**
  This project is also USA company project, that company also have a news channel in which I was build the algo to blur the unethical views like blood or nudity through Image processing algo like YOLO.
- **Online AI Doctor (USA)**
  This project is our USA research center project. Here I was ML Engineer and collaborate with Doctors panels who are specialist of difference domains after there verification of reports I put them in to our dataset. then Make a algo of ML who will detect the patient disease and they critical condition level and respond according to there action which is already when in a dataset of Medicine and active action.
- **KRISS.AI**
  This project was kyass solution client project. I which I was AI-Consultant. And guiding the AI developer team of product owner. I was responsible to make architecture of App ML as well as cloud server.
  https://www.kriss.ai/

- **Oman Agricultural enhancement**
  This project is given by the Omani client in which she wants IoT based connect camera with cloud server of Azure, where ML is dealing with the YOLO V8 to generate the report about health and soil moisture level to the client.

  Special cameras are provide form the client side and the server also.Data sets are also given by the client corps and also those images of plants which are anomalies

TOOLS

Python
MATLAB
Tableau
AWS
AZURE
Power BI
Django
Dataiku
Apache Superset
SQL
Mango.db

LIBRARIES &PLATFORM

numpy,
Optuna
pandas
matplotlib
seaborn
Sklearn
Tensorflow Keras
H2O,MLflow
Beautiful soup
Selenium
Scrappy
Scrapping Bee
fbprophet
Neural prophet
react js.
